CONTENTS OF VOLUME 119

NUMBER 1, JANUARY 1, 1982

CARBOHYDRATES

Methanolysis Products of Asparagine-Linked *N*-Acetylglucosamine and a New Method for Determination of *N*- and *O*-Glycosidic *N*-Acetylglucosamine in Glycoproteins That Contain Asparagine-Linked Carbohydrates
Tomohiro Mega and Tokuji Ikenaka 17

Quantitation of Acidic Capsular Polysaccharides by Alcian Blue Binding
Keith R. Powell, J. Owen Hendley, Karen E. Pohl, Anna Freidberg, and Wesley A. Volk 31

A Sensitive Silver Stain for Detecting Lipopolysaccharides in Polyacrylamide Gels
Chao-Ming Tsai and Carl E. Frasch 115

A Manual Method for the Spectrophotometric Determination of Reducing Carbohydrates with 2-Cyanoacetamide *Susumu Honda, Yoshiko Nishimura, Masaye Takahashi, Hirokazu Chiba, and Kazuaki Kakehi* 194

CHROMATOGRAPHIC AND ELECTROPHORETIC TECHNIQUES

Determination of Urinary Oxalate by High-Performance Liquid Chromatography
H. Hughes, L. Hagen, and R. A. L. Sutton 1

Separation of Major and Minor Deoxyribonucleoside Monophosphates by Reverse-Phase High-Performance Liquid Chromatography: A Simple Method Applicable to Quantitation of Methylated Nucleotides in DNA *Judith K. Christman* 38

Isoelectric Focusing of Multiple Forms of DNase in Thin Layers of Polyacrylamide Gel and Detection of Enzymatic Activity with a Zymogram Method Following Separation *Hyung Soo Kim and Ta-Hsiu Liao* 96

High-Resolution Electrophoresis of Urinary Glucosaminoglycans: An Improved Screening Test for the Mucopolysaccharidoses
John J. Hopwood and J. R. Harrison 120

A Simple, Economical Method for Staining Gels for Cathepsin B-Like Activity
John S. Mort and Michelle Leduc 148

The Use of Agar for Gel Electrophoresis of DNA
Christopher N. Bush and David S. Holmes 164

Two-Dimensional Electrophoresis on the Layers of Cellulose Acetate Membrane
Tosifusa Toda, Toshiko Fujita, and Mochihiko Ohashi 167

ENZYMATIC ASSAYS AND ANALYSES

Radioassay of the Stereospecificity of 2-Monoacylglycerol Acyltransferase
F. Manganaro, A. Kuksis, and J. J. Myher 4

A Rapid and Sensitive Spectrophotometric Assay for Prunasin Hydrolase Activity Employing Purified Mandelonitrile Lyase
Mara Gross, Gregory H. Jacobs, and Jonathan E. Poulton 25

Fast Determination of Pepsin Activity in a Colored Radial Diffusion Test at pH Optimum *C. Rudolph and H. D. Tauschel* 49

Purification of Individual Proteinase Isozymes from *Bacteroides nodosus* by Use of Polyacrylamide Gel Electrophoresis, a Fluorogenic Substrate Detection System, and a Simple Electroelution Apparatus *Dale Every and Richard S. Green* 82
A Sensitive Lipoxygenase Assay Based on Chemiluminescence *Esa-Matti Lilius and Simo Laakso* 135
An Enzymatic Cycling Procedure for NAD^+ Using an Irreversible Reaction with NAD^+-Peroxidase *C. Cox, P. Camus, J. Buret, and J. Duvivier* 185
A Convenient Continuous-Rate Spectrophotometric Method for Determination of Amino Acid Substrate Specificity of Aminotransferases: Application to Isoenzymes of Aspartate Aminotransferase *Robert Rej* 205

IMMUNOLOGICAL PROCEDURES

A Dot-Immunobinding Assay for Monoclonal and Other Antibodies *Richard Hawkes, Evelyn Niday, and Julian Gordon* 142

LIPIDS AND LIPOPROTEINS

Fluorescent Lipoprotein Probe *Raymond Bergeron and Jamie Scott* 128
Application of High-Performance Liquid Chromatographic Separation of Free Sterols to the Screening of Yeast Sterol Mutants *R. J. Rodriguez and L. W. Parks* 200

METABOLITE DETERMINATION

Simple Estimate of Ureides in Soybean Tissue *T. G. Patterson, R. Glenister, T. A. LaRue* 90

NUCLEIC ACIDS AND PROTEIN SYNTHESIS

Sequencing Psoralen Photochemically Reactive Sites in *Escherichia coli* 16 S rRNA *Douglas C. Youvan and John E. Hearst* 86

PEPTIDES, AMINO ACIDS, AND AMINO ACID DERIVATIVES

A Protease from *Astacus fluviatilis* as an Aid in Protein Sequencing *Erika Krauhs, Herbert Dörsam, Melvyn Little, Robert Zwilling, and Herwig Ponstingl* 153
Single-Column Amino Acid Analysis with *o*-Phthalaldehyde: An Evaluation of Two Commercial Buffer Systems *Gary R. Barbarash and Richard H. Quarles* 177

PROTEIN ANALYSES AND REAGENTS

A Microprocessor-Based Controller and Program for a Protein Sequenator *Geoffrey S. Begg and Francis J. Morgan* 12
Oxidation of Methionine to Methionine Sulfoxide as a Side Reaction of Cyanogen Bromide Cleavage *Regula Joppich-Kuhn, Jeffrey A. Corkill, and Roger W. Giese* 73

SPECIAL TECHNIQUES

Digitization of Sedimentation Equilibrium and Velocity Data for Analysis by Minicomputer *Thomas F. Holzman, Steven P. Leytus, Thomas O. Baldwin, and Walter F. Mangel* 62

Use of an Oxygen Electrode in Assaying Biodegradability
W. R. Mountcastle, Jr., Virginia A. Neely, and W. C. Neely 78
The Depolymerization of Actin by Specific Proteins from Plasma and Brain: A Quantitative Assay
Harriet E. Harris, James R. Bamburg, Barbara W. Bernstein, and Alan G. Weeds 102

SUBCELLULAR FRACTIONS AND SEPARATION

A Method for Extracting High-Molecular-Weight Deoxyribonucleic Acid from Fungi
Charles A. Specht, Concetta C. DiRusso, Charles P. Novotny, and Robert C. Ullrich 158

VITAMINS, COENZYMES, AND NUCLEOTIDES

Tissue Ascorbic Acid Analysis Using Ferrozine Compared with the Dinitrophenylhydrazine Method *Evelyn L. McGown, Michael G. Rusnak, Carolyn M. Lewis, and Jerry Ann Tillotson* 55

NUMBER 2, JANUARY 15, 1982

CARBOHYDRATES

N-[^{3}H]Acetyl-Labeling, a Convenient Method for Radiolabeling of Glycosaminoglycans *Magnus Höök, Johan Riesenfeld, and Ulf Lindahl* 236
A Highly Sensitive Periodic Acid-Silver Stain for 1,2-Diol Groups of Glycoproteins and Polysaccharides in Polyacrylamide Gels *Gérard Dubray and Guy Bezard* 325
Mild Alkaline Borohydride Treatment of Glycoproteins—A Method for Liberating Both *N*- and *O*-Linked Carbohydrate Chains
Shun-Ichiro Ogata and Kenneth O. Lloyd 351
Mass Spectrometry and ^{13}C Nuclear Magnetic Resonance Spectroscopy of Compounds Modeling the Glycopeptide Linkage of Glycoproteins
Karl Blumberg and C. Allen Bush 397
Fractionation of Oligosaccharides Containing *N*-Acetyl Amino Sugars by Reverse-Phase High-Pressure Liquid Chromatography
Karl Blumberg, Frederic Liniere, Lyubov Pustilnik, and C. Allen Bush 407

CHROMATOGRAPHIC AND ELECTROPHORETIC TECHNIQUES

High-Performance Liquid Chromatographic Procedure for Measuring ATP and ADP Levels in Tissue Microbiopsy: Application to Rat Wound Healing Proliferative Tissue *Didier Pruneau, Ernst Wülfert, Marc Pascal, and Christian Baron* 274
Isoelectric Focusing of Tubulin in a New Type of Charge-Balanced Agarose
Daniel P. Stromska 387
Separation of Retinol, Retinoic Acid, Mannose, Dolichylmannosylphosphate, Mannosylretinylphosphate, Dolichylphosphate, and Retinylphosphate by High-Pressure Liquid Chromatography *Tadashi Kurokawa and Luigi M. De Luca* 428
Two-Dimensional Gel Electrophoresis of Nonhistone Chromatin Proteins with Nonequilibrium pH Gradient Electrophoresis as the First Dimension
Dana Tyrell, Paul J. Isackson, and Gerald R. Reeck 433

ENZYMATIC ASSAYS AND ANALYSES

Preparation of Radioactive Acetyl-L-Carnitine by an Enzymatic Exchange Reaction
R. Emaus and L. L. Bieber 261

Enzymatic Synthesis of Radioactive (—)-Carnitine from γ-Butyrobetaine Prepared by the Methylation of γ-Aminobutyric Acid
Albert Daveluy, Rehana Parvin, and Shri V. Pande 286

β-Galactosidase Immunoassay for the Measurement of Cyclic AMP
Evelyne Joseph and Jean-Luc Guesdon 335

Microanalysis of Lactose in Tissue Culture Medium Using an Enzymatic–Fluorometric Method *Jerzy K. Kulski and Gertrude Case Buehring* 341

A Micromethod for the Detection of Arylsulfatases A and B in Cultured Fibroblasts and Amniocytes *R. A. Gravel, A. Leung, F. Tsui, and E. H. Kolodny* 360

A Rapid Assay for Dipeptidyl Aminopeptidase III in Human Erythrocytes
Theodore H. D. Jones and Alexia Kapralou 418

IMMUNOLOGICAL PROCEDURES

Radioimmunolocalization of Murine Mammary Tumor Virus Proteins in Gels
James N. Bausch, K. S. Prasad, and S. Spiegelman 293

Adaptation of the Enzyme-Linked Immunosorbent Assay (ELISA) to the Quantitative Analysis of Abscisic Acid *Jaleh Daie and Roger Wyse* 365

Heterogeneity of Component Bands in Isoelectric Focusing Patterns
John D. Rodwell 440

INSTRUMENTATION

A Sensitive Analytical Apparatus for Measuring Hydrogen Production Rates. I. Application to Studies in Small Animals. Evidence of the Effects of an α-Glucosidehydrolase Inhibitor in the Rat
Clinton R. Ostrander, David K. Stevenson, Joseph Neu, John A. Kerner, and Shimon W. Moses 378

MEMBRANES AND RECEPTORS

A Method for Measuring Anion Transfer across Membranes of Hemoglobin-Free Cells and Vesicles by Continuous Monitoring of Fluorescence
A. Darmon, O. Eidelman, and Z. I. Cabantchik 313

METABOLITE DETERMINATION

A Sensitive Method for Measuring Pyrophosphate in the Presence of a 10,000-fold Excess of Orthophosphate Using Inorganic Pyrophosphatase
A. A. Baykov and S. M. Avaeva 211

High-Performance Liquid Chromatographic Method for the Determination of Phytate
Ernst Graf and Frederick R. Dintzis 413

PEPTIDES, AMINO ACIDS, AND AMINO ACID DERIVATIVES

A Microassay for Phallotoxins: Quantification of Phallotoxins in *Amanita* Species
Jerald E. Mullersman and James F. Preston 266

Enzymatic Preparation of α- and β-Deuterated or Tritiated Amino Acids with L-Methionine γ-Lyase
Nobuyoshi Esaki, Seiji Sawada, Hidehiko Tanaka, and Kenji Soda 281
Synthesis and Quantitation of Glucitollysine, a Glycosylated Amino Acid Elevated in Proteins from Diabetics
Beat Trüeb, Graham J. Hughes, and Kaspar H. Winterhalter 330

PHYSICAL TECHNIQUES

Separation of Epidermal Cells by Density Gradient Centrifugation on a Continuous Colloidal Silica (Percoll) Gradient
Michael A. Goldenhersh, Robert A. Good, Nurul H. Sarkar, and Bijan Safai 246
Investigation of Human Chorionic Somatomammotropin—Antihuman Chorionic Somatomammotropin Antibody Binding by Two Physicochemical Methods: Phase Partition and Fluorescence Polarization
Paul Urios, Krzysztof M. Rajkowski, Robert Engler, and Nicole Cittanova 253
A Novel Reversible Thiol-Specific Spin Label: Papain Active Site Labeling and Inhibition
Lawrence J. Berliner, Jacob Grunwald, H. Olga Hankovszky, and Kalman Hideg 450

PROTEIN ANALYSES AND REAGENTS

A Novel Method for Protein Quantitation Using a Competitive Binding Assay
Robert Best, Elizabeth Howell, Arthur Decillis, and Keith J. Schray 299
The Synthesis of a Photolabile Detergent and Its Use in the Isolation and Characterization of Protein
W. W. Epstein, D. S. Jones, E. Bruenger, and H. C. Rilling 304
A Simple, Rapid, and Sensitive Method for Measuring Protein Concentration in Subcellular Membrane Fractions Prepared by Sucrose Density Ultracentrifugation *Ian A. Simpson and Ole Sonne* 424

SPECIAL TECHNIQUES

Rapid *in Vitro* Labeling Procedures for Two-Dimensional Gel Fingerprinting
Yuan Fon Lee and Edison R. Fowlks 224
Determination of Acid-Labile Sulfide and Zero-Valence Sulfur in Subchloroplast Particles in the Presence of Sodium Dodecyl Sulfate
Hidehiro Sakurai, Stephen Lien, and Anthony San Pietro 372

VITAMINS, COENZYMES, AND NUCLEOTIDES

Reverse-Phase Ion-Pair Chromatography of Polyvalent Ions Using Oligonucleotides as Model Substances *W. Jost, K. Unger, and G. Schill* 214
A Simple and Rapid Method for the Synthesis of Nucleoside 5′-Monophosphates Enriched with ^{17}O or ^{18}O on the Phosphate Group *R. S. Goody* 322
Analysis of Nucleotides from *Tetrahymena* by High-Performance Liquid Chromatography *Michael P. Reinhart and Mary H. Koroly* 392

AUTHOR INDEX FOR VOLUME 119 456

The Subject Index for Volume 119 will appear in the December 1982 issue as part of a cumulative index for the year 1982.

INFORMATION FOR AUTHORS[1]

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell and tissue culture techniques that are of general application.

— Sequencing and synthesis of nucleic acids; chemical mutagenesis.

— Purification methods for enzymes and other proteins when a high level of purity has been achieved.

— Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that have a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in triplicate to ***Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.** In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. At least three copies should be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. Authors should indicate on the title page the appropriate *subject category* for listing in the Table of Contents. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph

---

[1] An extended Information for Authors appeared in Volume 115, Number 1, July 15, 1981. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125,** 255–260.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) *in* The Proteins (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246–409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
